

Extremely Effective, Efficient and Profitable Ways to Monetize Your In-Ground Assets

All around the world, companies of all kinds are searching for: (1) new, highly effective and efficient ways of increasing their income streams, (2) discovering and implementing new lucrative ways to monetize their assets, especially those assets that they previously thought they could not monetize and (3) building their profits to sustain and/or expand their establishment. Without those three things, many companies are finding that combined with the strain of the global economy they are either at a financial-profit standstill or significant decrease or in a financial-profit nose-dive to an inevitable bankrupt crash-landing.

Many of the companies that are in trouble or headed toward it whether they know it are companies that own In-Ground Assets. In-Ground-Assets are assets that a company owns that are in the ground such as: oil and gas, coal, gold, silver, silica, kaolin, diamonds, copper, aluminum, nickel, liquid traded metals, and other minerals. Many companies, even some enormously large multi-million and multi-billion dollar companies do not know there are ways to monetize their In-Ground-Assets even **BEFORE** they sell them.

But Profit Increase Funding has ways available through our over 150 Funding Source Companies with **BILLIONS** of dollars to invest that can provide your company with the ability to tap into cash based upon and derived from your own In-Ground-Assets **BEFORE** you sell them.

All it takes is for you to provide us with an Assay of your In-Ground-Assets (and some other minor documentation), which we will submit to one of our 150 Funding Source Companies. Then we will determine how much cash we can forward to your company by means of you putting up your In-Ground-Assets as collateral for the loan.

One of the many beautiful things about this kind of financing is that the more monetary value your In-Ground-Assets have, the more cash we can advance/loan to you. That means that for example, if your company is a large multi-million or multi-billion dollar oil refinery company or gold-mining company or another kind of mineral mining/refining company, you are in a prime position to obtain **MILLIONS OR BILLIONS OF DOLLARS** for your company by allowing us to monetize your In-Ground-Assets.

If you will soon be or already are in the process of contract negotiations regarding your In-Ground Assets, then we strongly recommend that you contact us during or preferably just before that contractual negotiating process in order to obtain the maximum advantage possible in structuring them into an expedient and highest

revenue source of cash for your company. But even if you already have contracts in place, we can still obtain cash for you! The process is very simple and **MANY** times there are **NO UPFRONT FEES**.

We provide you with the finest services available in the entire world for assisting you with obtaining revenue for your company! We provide revenue solutions that not only make sense but also make you an abundance of dollars and cents! We can additionally provide you with: (1) construction project financing, (2) private equity financing, asset financing, (3) capital financing, (4) financing for mining projects, (5) asset based lending, (6) mine funding, (7) gold mine financing, (8) Kentucky coal mine loans, (9) mining canada financing, (11) Denver mining financing, and much, much more!

We specialize in successfully and abundantly providing financing for large-scale In-Ground Asset mining projects.

We Also Purchase Mineral Rights

Profit Increase Funding also purchases the share or percentage of earnings paid to a company (or someone) who has an ownership interest in Mineral Rights and we can and will purchase those Mineral Rights from you at a slightly discounted price and minus our small fee.

This applies to all kinds of minerals including oil or gas. In fact, from time to time oil and gas companies may decide to sell their mineral rights because: (1) oil production becomes too problematic, (2) an encroachment of salt water seeps into the wellbore, therefore cutting off the flow of oil or gas, (3) oil prices decrease to the point of being unprofitable, (4) leaks and mechanical failures, or (5) because oil and gas production is a very volatile and unpredictable endeavor, or (6) sometimes mineral rights are sold because the production of oil or gas does not last as long as anticipated.

If any of those or other scenarios apply to your situation you can: (a) Sell all of your mineral rights, (b) sell 3/4ths of your mineral rights, (c) sell 1/2 or less of your minerals or (d) sell 1/4th or less of your minerals. Therefore, if you only want to sell a portion of your mineral rights and hold onto the rest of them while they begin or continue to yield you the profits you expect, then you may do so.

We are a leader in the world in the acquisition of oil and gas royalties and many other kinds of minerals and overriding royalties. We will provide you with personalized focused attention to your specific needs and desires and do so with the highest quality and the utmost efficiency. We will provide and prepare all of the necessary

documentation and transfer deeds for you and then provide you with a non-binding offer that can lead to you obtaining a large lump sum of cash in exchange for the sale of your mineral rights. The mineral rights can be located anywhere in the world and we will purchase mineral interests that are producing or non-producing.
